

World Haptics 2017 Workshops

World Haptics 2017 solicits proposals for workshops/tutorials, to be held on June 6, 2017 preceding the full conference.

Important Dates:

December 23: Expression of Intent

March 19, 2017: Workshop and tutorial proposals due

March 31, 2017: Organizers notified

April 28, 2017: Final schedule, webpage, & speaker list due

June 6, 2017: Workshops and tutorials take place

Expression of Intent: We would appreciate it if interested organizers of workshops or tutorials could send an email to workshops@worldhaptics2017.org by Dec 23 2016 suggesting a title and the name of organizers.

Informal enquiries are encouraged, however a formal email submission including a full proposal is required for consideration by March 19, 2017. The description of the workshop/tutorial will be uploaded on the website and included in the proceedings. The template for proposals can be downloaded [here](#).

The goal of the workshops/tutorials is to create an informal environment for attendees with common interests and diverse perspectives on topics important to the haptics community. Possible workshops/tutorials could be aimed at, but not limited to: new approaches to basic or applied research, new methodologies, design innovation, theoretical analyses, emerging research areas, connections to other research fields. Presentations in workshops/tutorials should not duplicate presentations at the main conference, but they could deepen the analysis, discuss theoretical accounts, or even present related material. Multiple workshops/tutorials will be run on parallel tracks.

Interested organizers can choose between different formats:

Open Workshops: The organizers propose a topic, which (if approved) is disseminated openly (also through the conference website). Speakers can apply to the organizers. The organizers must supply a final program and list of speakers to the Workshops Chairs by April 28, 2017.

Panel Workshops: The organizers propose a topic and a tentative panel of speakers.

Tutorials: Tutorials are seminars of established research areas that are aimed to provide hands-on experience. They should be focused on a single topic and should be presented by two or three experts in the field.
